Antenna engineering

Preface

Chapter 1. Introduction

- 1.1. Types of antennas
- 1.2. Radiation mechanisms
- 1.3. Current distribution on a thin wire antenna

Chapter 2. Fundamental parameters of antennas

- 2.1. Radiation pattern
- 2.2. Radiation power density
- 2.3. Radiation intensity
- 2.4. Directivity
- 2.5. Antenna efficiency
- 2.6. Gain
- 2.7. Bandwidth
- 2.8. Polarization
- 2.9. Input impedance
- 2.10. Antenna radiation efficiency
- 2.11. Antenna effective area
- 2.12. Antenna Temperature

Chapter 3. Radiation integrals and auxiliary potential functions

- 3.1 The vector potential A for an electric current source J
- 3.2 The vector potential F for a magnetic current source M
- 3.3. Solution of the inhomogeneous vector potential wave equation

Chapter 4. Linear wire antennas

- 4.1. The infinitesimal dipole
- 4.2. Small dipole
- 4.3. Finite length dipole
- 4.4. Half-wavelength dipole
- 4.5. Linear elements near or on infinite perfect conductors
- 4.6. Inverted-L and Inverted-F Antennas

Chapter 5. Loop antennas

- 5.1. Small circular loop
- 5.2. Circular loop of constant current
- 5.3. Circular Loop of Non-uniform Current
- 5.4. Polygonal loop antennas

Chapter 6. Impedance matching for wire antennas

- 6.1. The impedance match
- 6.2. Balun (balanced line to unbalanced line transformer)
- 6.3. Dipoles with Traps

Chapter 7. Array antennas

- 7.1. Two element array
- 7.2. N-element array
- 7.3. Broadside Array
- 7.4. Ordinary End-fire Array
- 7.5. Phased (scanning) Arrays
- 7.6. Directivity
- 7.7. 3-D Characteristics of a Linear Array
- 7.8. Planar array
- 7.9. Circular array

Chapter 8. Microstrip antennas

- 8.1. Rectangular patch
- 8.2. Cavity Model for the Radiated Field of a Rectangular Patch
- 8.4. Circular polarization with patch antennas

Chapter 9. Aperture Antennas

- 9.1. Uniqueness Theorem
- 9.2. Field Equivalence Principle
- 9.3. Rectangular aperture
- 9.4. The Uniform Rectangular Aperture in Open Space
- 9.5. Circular apertures

Chapter 10. Horn antennas

- 10.1. The H-plane sectoral horn
- 10.2. The E-plane sectoral horn

Chapter 11. Reflector antennas

- 11.1. Principles of parabolic reflectors
- 11.2. Parabolic reflector

Chapter 12. Frequency independent antennas

- 12.1 Frequency-Independent Antennas
- 12.2. Equiangular spiral antenna
- 12.3. Log-periodic antennas

Annex I. Gradient, divergence and curl in rectangular, cylindrical and spherical coordinates
