Microwave remote sensing tools and ecoinformatics

Contents

Summary

Preface

List of abbreviations and acronyms

List of parameters

1. Theoretical and applied basics in microwave radiometry
 - 1.1. Introduction
 - 1.2. Main concept of remote monitoring technology
 - 1.3. Basic models of microwave emission from water and land surfaces
 - 1.4. Remote-sensing research platforms and their equipment
2. Remote sensing technologies and data processing algorithms
 - 2.1. Microwave methods
 - 2.2. Physical, theoretical and experimental background of microwave monitoring
 - 2.3. Remote sensing technologies in the infrared and optical bands
 - 2.4. The atmosphere microwave monitoring
 - 2.5. Algorithms for remote data processing
 - 2.6. An adaptive technology for the classification and the qualitative interpretation of the data of the remote sensing of the water surface
 - 2.7. A device to measure the geophysical and hydrophysical parameters
 - 2.8. Direct and inverse problems of microwave monitoring
 - 2.9. Interferometry methods in the georisk assessment tasks
3. GIMS-based method of vegetation microwave monitoring
 - 3.1. Introduction

- 3.2. Monitoring of soil-plant formations
 - 3.3. Links between experiments, algorithms and models
 - 3.4. Microwave model of vegetation cover
4. Microwave remote sensing of soil moisture for agricultural and hydrological applications
 - 4.1. Introduction
 - 4.2. Practical microwave radiometric risk assessment of agricultural function
 - 4.3. Geoinformation monitoring system of agricultural function
 - 4.4. Microwave monitoring of soil moisture
 - 4.5. Basic parameters and indicators of the state of soils and water objects evaluated by means of radiometry methods
5. Vegetation screening effect in the remote sensing monitoring
 - 5.1. Introduction
 - 5.2. Vegetation media as an object in a study of attenuation of electromagnetic waves
 - 5.3. Measuring system for retrieving attenuation of microwaves in vegetation
 - 5.4. Experimental results
 - 5.5. Theoretical generalization
 - 5.6. Conclusion and discussion
6. Microwave tools for the diagnostics of forest fires
 - 6.1. Introduction
 - 6.2. Wildfires as a component of global ecodynamics
 - 6.3. Microwave radiometric observations of temperature anomalies
 - 6.4. Features of SHF-radiometric monitoring of wildfires
7. Space methods and monitoring tools for the investigation of aquatic systems
 - 7.1. Introduction
 - 7.2. Microwave radiometry in the remote monitoring of the ocean
 - 7.3. Innovative Big Data approach to the Arctic Basin pollution problem
 - 7.4. Geocological information-modeling system and its implication for the biocomplexity and survivability assessment of the Okhotsk Sea ecosystem
 - 7.5. The Peruvian Current ecosystem andecoinformatics tools

- 7.6. Scenario for the water cycle stabilization in the Aral Sea region
- 7.7. Mathematical modelling and numerical experiment in the geophysical study on the Aral Sea region
- 7.8. Simulation experiments and forecast of the water balance components of the Aral Sea hollow
- 8. Global climate change problems
 - 8.1. Introduction
 - 8.2. Interactive character of global climate problems
 - 8.3. Anthropogenic sources of carbon
 - 8.4. Resources of the biosphere and the greenhouse effect
 - 8.5. The greenhouse effect and global carbon cycle
 - 8.6. Global climate and natural disasters
 - 8.7. Reality and expected changes in the environment
 - 8.8. The current needs for the ecological-climatic modeling
 - 8.9. Climate, biosphere and society
