Advanced control strategies for networked/distributed systems – theory and applications

Chapter 1. Lyapunov-based networked model predictive control

- 1.1. Networked control systems
- 1.2. Network delay modeled as disturbance
- 1.3. Data-packet dropouts modeled as disturbances
- 1.4. Predictive controller with Luenberger observer design
- 1.5. Vehicle drivetrain application
- 1.6. EPAS application
- 1.7. Conclusions

Chapter 2. Chance-constrained networked model predictive control

- 2.1. Problem statement
- 2.2. Network delay modeling and controller
- 2.3. Vehicle drivetrain application
- 2.4. DC motor application
- 2.5. Conclusions

Chapter 3. Adaptive Smith-predictor for networked switching systems

- 3.1. Adaptive Smith-predictor
- 3.2. Electronic throttle application
- 3.3. Conclusions

Chapter 4. Decentralized model predictive control for distributed systems

- 4.1. Decentralized predictive controllers design
- 4.2. Mobile robot platooning
- 4.3. Conclusions

Chapter 5. Non-cooperative distributed model predictive control

- 5.1. Distributed model predictive controller (DMPC) design
- 5.2. Single-lane vehicle platooning application using IO-DMPC
- 5.3. Single-lane vehicle platooning application using SS-DMPC1
- 5.4. Single-lane vehicle platooning application using SS-DMPC2
- 5.5. Multiple-lane vehicle platooning application
- 5.6. Conclusions

Chapter 6. Robust coalitional distributed model predictive control

- 6.1. Coalitional DMPC (C-DMPC)
- 6.2. Other strategies - for comparison
- 6.3. Illustrative application
- 6.4. Conclusions
