## **Handbook of design examples for reinforced concrete and prestressed concrete elements according to Eurocode 2 and FIB Model Code 2010**

### **Cuprins**

Preface

1. Introduction

1.1 Basis of design

2. Materials

2.1 Concrete

2.2 Reinforcing steel

2.3 Prestressing steel

2.4 Bond of embedded steel reinforcement

3. ULS checks

3.1 Behaviour

3.2 Bending without axial force

3.3 Sections subjected to bending with axial force

3.4 Second order effects

3.5 Sections subjected to biaxial bending

3.6 Shear

3.7 Punching shear

4. SLS checks

4.1 Evaluation of steel and concrete stresses in Stage II

4.2 Stress limitation

- 4.2 Crack control
- 4.3 Deflection control
- 5. Design of prestressed concrete elements
  - 5.1 Prestressing force
  - 5.2 Prestress losses
  - 5.3 Anchorage of tendons
  - 5.4 Magnel diagram
  - 5.5 ULS checks
  - 5.6 SLS checks
  - 5.7 End blocks
- 6. Design of a reinforced concrete slab
  - 6.1 Design of a regular reinforced concrete slab
  - 6.2 Design of a reinforced concrete slab for a warehouse
- 7. Design of a reinforced concrete beam
  - 7.1 Design of a simply supported RC beam
  - 7.2 Design of a RC beam subjected to seismic
- 8. Design of reinforced concrete columns
  - 8.1 Design example no. 1
  - 8.2 Design example no. 2
- 9. Design of circular reinforced concrete columns
  - 9.1 Bending moment design
  - 9.2 Shear design
  - 9.3 Biaxial bending design
- 10. Slab punching design
  - 10.1 Interior column

- 10.2 Edge column
- 11. Design of prestressed concrete beams
  - 11.1 Prestressed concrete beam with pre-tensioned reinforcement
  - 11.2 Prestressed concrete beam with post-tensioned reinforcement
- 12. Design examples using strut-and-tie methods
  - 12.1 Brief theoretical background
  - 12.2 Horizontal diaphragm
  - 12.3 Deep beam no. 1
  - 12.4 Deep beam no. 2
  - 12.5 Corbel
  - 12.6 Dapped beam end
- 13. Assessment of inelastic strength and deformation capacities of RC elements
  - 13.1 Brief theoretical background
  - 13.2 RC beam
  - 13.3 RC column
  - 13.4 RC coupling beam
- 14. Evaluation of the biaxial bending moment capacity of RC columns
  - 14.1 Square column
  - 14.2 Rectangular column
  - 14.3 L-shaped column
- 15. Evaluation of the capacity of a circular hollow section
- 16. Design of a prestressed concrete circular tank
  - 16.1 Brief theoretical background
  - 16.2 Design of a prestressed concrete circular tank
- 17. Design of a slender reinforced concrete silo

17.1 Brief theoretical background

17.2 Design example

18. Numerical modelling of RC elements

18.1 Cracking patterns of deep beams subjected to uniform distributed loads

18.2 Cracking patterns of RC beams

18.3 Shear capacity of RC columns

18.4 Shear capacity of slabs with and without transverse reinforcement

Bibliography
